

Energy Savings

Guaranteed!

Our PQ-Tronic control technology provides optimized energy for high-pressure pumps. Proper pump design, elimination of “overflow“, and the use of speed-controlled motors can reduce costs by up to 70 %.

NOW the measuring process is fast and simple

KNOLLE-PASS

- 1.** We can determine your energy-saving potential on site with a brief measurement, followed by a computer calculation. The result is your energy protocol.
- 2.** We can also provide you with an on-site cost/benefit appraisal, including your amortization analysis.
- 3.** You then decide whether to go for a PQ-Tronic upgrade.

If you wish to obtain more detailed information, please contact us.
