

We determine  
your possible  
energy savings  
on-site

**Guaranteed!**

So far, not many customers opted for our energy saving PQ-Tronic control technology because the determination of the possible savings was too complex.

**NOW** the measuring process is fast and simple

## KNOLLE-PASS

- 1.** We can determine your energy-saving potential on site with a brief measurement, followed by a computer calculation. Afterwards, you receive your energy protocol.
- 2.** Additionally, we provide you with an on-site cost/benefit appraisal, including your amortization analysis.
- 3.** You then decide whether to go for a PQ-Tronic upgrade.

If you wish to obtain more detailed information,  
please contact us.
